ENUM

ENUM (RFC 2916) is the Internet Engineering Task Force (IETF) protocol that will assist in the convergence of the Public Switched Telephone Network (PSTN) and the IP network; it is the mapping of a telephone number from the PSTN to Internet services — telephone number in, URL out. ENUM was developed as a solution to the question of how to find services on the Internet using only a telephone number, and how telephones, which have an input mechanism limited to twelve keys on a keypad, can be used to access Internet services.

MIGRATION. ALLOCATION.
NO AGGRAVATION.

Take A Trip Into The Future

And See How IT Will Change

Few IT managers have the luxury of looking ahead more than a year or two.

Nicholas Carr, the author of "Does IT Matter?", takes readers on a trip
